**Abstract.** Social issues are closely linked to a country's economic development. "Attention to the people" and "quality education" are important social issues that can directly impact a country's economy. Quality education can lead to an increase in human capital, which is essential for economic growth. It can also lead to the development of new technologies and industries that can create new job opportunities.

**Key words:** quality education, attention to people, economic development, social safety, organizations, student, the quality standards, individuals

Knowledge management is the dissemination and search for people's experience and relevant information among related people or groups of people. Here the most important thing is the knowledge of people and the interaction between people: the exchange of ideas, solutions and relevant information when trying to create new solutions. [1]

Focusing on “attention to people and quality education” can have significant positive effects on a country's economic development. Investing in high-quality education can lead to the development of a skilled workforce that is more innovative, productive, and adaptable to the changing demands of the modern economy. Education also helps reduce poverty and social inequality, which in turn leads to increased economic growth and development.

Moreover, paying attention to social issues such as healthcare, gender equality, and social safety nets can also have a positive impact on a country's economic development. Ensuring access to quality healthcare and education, promoting gender equality, and providing social safety nets create a healthier and more productive workforce that can contribute significantly to a country's economic development.

Social issues have a significant impact on the development of a country's economy. When social issues like poverty, income inequality, and lack of access to education and healthcare are prevalent in a country, it can lead to a less educated and less healthy workforce, which can have negative implications for economic growth and productivity.

Quality education applies to all areas, and its development is the most important aspect of the state's economy. Even, the development of the tourism industry depends, first of all, on the effective establishment of cooperation in the field of tourism and the quality of training.[3]

Additionally, social issues like discrimination and social exclusion can create social unrest and political instability, which can deter foreign investment and negatively affect the economy.

On the other hand, addressing social issues can have positive impacts on the economy. For example, investing in education and healthcare can lead to a better-educated and healthier workforce, leading to higher productivity and economic growth. Addressing income inequality can also promote social cohesion and stability, making the country a more attractive destination for investment.

There are several problems in the development of quality education, some of which include:

- ✚ Lack of funding: Most educational institutions, especially those in developing countries, suffer from inadequate funding, which makes it difficult to provide relevant learning materials and maintain necessary technological infrastructure.

- ✚ Inadequate teacher training and certification: Teachers are critical to the process of quality education, and lack of training and certification can affect the quality of the education provided.

- ✚ Inconsistent quality standards: Across different countries, there are variations in the quality standards that educational institutions are required to adhere to. This can lead to inconsistency in the quality of education provided.

✚ Insufficient access to education: Unequal access to education can limit the opportunities available to students, especially those from low-income families. This can affect their ability to access quality education.

✚ Limited use of technology: In today's digital age, the use of technology can enhance the learning experience by making it more interactive, but many educational institutions do not have adequate access to technology or do not use it properly.

✚ Cultural and social constraints: In some cultures, girls are not encouraged or allowed to attend school, and this limits their educational opportunities. Also, discrimination based on race or social status can limit educational opportunities.

✚ Income inequality: When a small percentage of the population controls the majority of the country's wealth, it can lead to social unrest and negatively impact economic growth.

✚ Lack of education: A poorly educated workforce can limit the country's potential for growth and innovation.

✚ Gender inequality: Gender inequality can limit women's participation in the workforce and limit the country's potential for growth.

✚ Poverty: Widespread poverty can limit economic mobility, limit access to quality education and healthcare, and limit the potential for growth.

✚ Corruption: Corrupt practices can negatively impact economic growth and create barriers to business development and investment.

✚ Health issues: Health issues such as the prevalence of diseases can limit productivity and increase healthcare costs, which can limit economic growth.

Developing quality education requires a multi-faceted approach and collaboration from various stakeholders such as educators, policymakers, parents, and the wider community. Here are some actions that can be taken:

1. Investment in education: Governments, individuals, and organizations need to invest in education to provide the necessary resources, infrastructure, and technologies to support quality education.

2. Professional development for educators: Continuous professional development for teachers and educators can improve their teaching abilities and ensure that they are delivering quality education.

3. Curriculum development: The curriculum should be designed to meet the learning needs of students and cover all relevant topics to ensure that students receive a holistic education.

4. Student-centered approach: Education should be designed to be student-centric, where learners are approached as individuals with different skills and interests.

5. Parental involvement: Parents and caregivers should be involved in their children's education to provide support and encouragement.

6. Education policymaking: Policymakers need to make policies that encourage and support high-quality education.

7. Use of technology: Effective use of technology in education can help improve access to quality education and create a more inclusive learning environment.

These actions can help to develop quality education and ensure that learners receive the best possible education.

Combined, prioritizing "attention to people and quality education" and addressing social issues can create a virtuous cycle of economic growth, social progress, and human development, leading to sustainable development.

In summary, social issues are a crucial factor that must be considered in the development of a country's economy.

### Abstract

In this article, in the year of quality education in our country, attention will be paid not only to people, but also to economic and social issues that led to the development and modernization of our country. Mainly ways to improve the quality of education modern approaches are described.

**Keywords.** modernization, pedagogical technologies, quality of education, professional knowledge.

During the past period, within the framework of the Action Strategy on the five priority directions of the development of our country in 2017-2021, about 300 laws and more than 4,000 decisions of the President of the Republic of Uzbekistan aimed at the fundamental reform of all spheres of state and social life were adopted. Also, systematic work was carried out to ensure human rights, strengthen the accountability and openness of state bodies, and increase the role of civil society institutions, mass media, and the political activity of population and public associations. By the Decree of the President of February 28, 2023, the state program for the implementation of the
